Visual Vocabulary

Definition	Correlation	Ranking
Correlation measures the strength and direction of the relationship between two variables. It ranges from -1 (perfect negative correlation) to 1 (perfect positive correlation).	Correlation measures the strength and direction of the relationship between two variables. It ranges from -1 (perfect negative correlation) to 1 (perfect positive correlation).	Ranking is a non-parametric statistical method used to compare data points based on their relative positions. It is often used when the data is not normally distributed or when the scale is ordinal.
Distribution	Change over Time	Part-to-Whole
Distribution measures the spread or dispersion of data points around a central value. It is often represented by a bell curve (normal distribution).	Change over Time measures the rate of change or growth of a variable over a specific period. It is often represented by a line graph.	Part-to-Whole measures the relative contribution of individual components to the total. It is often represented by a pie chart.
